PROFILE SUMMARY

Website:- [My Profile](#)

Data Engineering & QA Analyst with 3.7+ years at Accenture delivering enterprise-scale data solutions across US Healthcare (Medicare) and Banking & Financial Services. Expert in Azure Data Factory, Databricks (PySpark), SQL, Python, and Power BI — with a track record of building compliant, high-accuracy data pipelines and automated test frameworks. Certified across Azure (AZ-900, AI-900, PL-900), Google Cloud, and Databricks. Proven ability to lead end-to-end QA (300+ test cases, 50+ APIs) and data governance initiatives in regulated environments. Awarded GenAI TechWeek Star and recognised as Information Security Advocate Elite (2025).

EDUCATION

MCA (Master's in Computer Application)
Visveswaraya Technological University

April 2022
| CGPA: 8.0 / 10 — First Class with Distinction

PROFESSIONAL EXPERIENCE

Company: - Accenture Pvt Ltd

Dec 2022 – present

Delivered data engineering and QA solutions for US Healthcare and Banking clients at Accenture, contributing to pipelines processing millions of records with 100% accuracy SLAs..

- Collaborated directly with US-based clients across time zones, translating complex business requirements into scalable Azure-based data solutions and automated test frameworks.
- Worked across cross-functional teams spanning data engineering, QA, business analysis, and DevOps to drive on-time, compliant project delivery in Agile environments.
- 3+ years hands-on with Azure Cloud (ADF, Databricks, Synapse, DevOps) — supported by 9 industry certifications including AZ-900, AI-900, PL-900, Google ACE, Databricks DE Associate, and GitHub Copilot (GH-300).
- Expert in end-to-end data validation — from RAW to Gold layer — including field-level reconciliation, business rule verification, metadata governance, and defect lifecycle management using JIRA and ALM.
- Validated 50+ REST APIs using Postman and Swagger across Banking and Healthcare platforms, ensuring response accuracy, authentication, and performance compliance across multiple environments.
- Built and tested ADF pipeline orchestrations processing multi-state Medicare fee schedule data; used PySpark in Databricks notebooks to verify complex transformation logic against regulatory benchmarks.
- Led UI and automation testing for Power BI dashboards and web applications using Selenium (Java), reducing regression testing cycle time through reusable XPath-based test scripts.
- Recognised as GenAI TechWeek Star for applied use of GitHub Copilot and Prompt Engineering in accelerating data pipeline testing workflows; designated Information Security Advocate Elite (2025).

TECHNICAL SKILLS

Cloud & Data Engineering:

- Azure Cloud, Azure Data Factory (ADF), Containers, Virtual Machines, Databricks, Azure Synapse Analytics

Database & Programming:

- SQL Server, SSMS, PostgreSQL, PL/SQL, Python

Business Intelligence & Analytics:

- Power BI, Power Platform, Data Modelling, Reporting & Dashboards

API & Testing Tools:

- Postman, Swagger, Selenium, GEN Wizard, Automation Testing, Test Case Design, Defect Management (JIRA)

DevOps & Collaboration Tools:

- Azure DevOps (ADO), Version Control (Git/GitHub), Figma

AI Enhancement :

- Prompt Engineering, AI/ML Integration, Cloud-based Data Solutions, GitHub Copilot, Google AI Applications creation

PROJECT EXPERIENCE

Project: -AmeriHealth Medicare: - FEE SCHEDULE US (HEALTHCARE)

Apr 2023 – feb 2024

Role: Data Governance & Data Engineering Analyst

Client Domain: Medicare / Healthcare Data Platform

Tools & Technologies: Azure Data Factory (ADF), Databricks, PySpark, Azure Synapse Analytics, SQL Server, Azure Pipeline workflow Monitor and Functionality Testing, Python

Project Description:

Led data pipeline testing and validation for large-scale Medicare fee schedule data integration across multiple states, ensuring end-to-end data integrity, governance, and regulatory compliance within Azure-based data platforms.

Key Responsibilities & Achievements:

- Validated and tested Azure Data Factory pipelines ingesting fee schedule data across 15+ US states, ensuring 100% accuracy against business requirements and processing 2M+ records per pipeline run.
- Conducted end-to-end testing across layered data architectures (RAW, Standardized, Bronze, Silver, Gold, and Consumption) to confirm structured data flow and correct lineage.
- Utilized PySpark in Databricks and SQL to verify complex business rules, data transformations, and calculations against regulatory and operational benchmarks.
- Ensured metadata accuracy, data lineage, and governance using Informatica IIG, strengthening audit readiness and traceability across all layers.
- Employed Azure Monitor and Synapse Analytics for performance monitoring, issue resolution, and validation of successful pipeline executions.
- Performed data quality, reconciliation, and exception testing to confirm adherence to business logic, transformation accuracy, and compliance standards.
- Delivered an automated validation framework that reduced manual verification time by 40% and improved overall pipeline efficiency, enabling faster regulatory-compliant releases.

Project: -HEDIS 2.0 MEDICARE: (US HEALTHCARE)

mar 2024 – oct 2024

Role: Quality Assurance Analyst

Client Domain: Healthcare / Medicare Data Analytics

Tools & Technologies: Azure Databricks, Azure Synapse, Application Lifecycle Management (ALM), SQL, Python

Project Overview:

Supported the QA team in the successful delivery of the **HEDIS 2.0 project**, ensuring data quality, integrity, and compliance with regulatory and business requirements across multiple subject areas.

Key Responsibilities & Achievements:

- **Prepared and executed 100+ test cases** aligned with **Data Quality (DQ) rules**, ensuring comprehensive validation and compliance with project specifications.
- **Managed defect lifecycle** using **ALM**, efficiently tracking, prioritizing, and resolving issues to maintain timelines and uphold quality standards.
- **Documented project outcomes and QA results** across multiple domains, ensuring **accuracy, regulatory alignment, and stakeholder transparency**.
- **Generated and validated extract files**, ensuring all data extraction processes were accurate, consistent, and adhered to technical specifications.
- Conducted **parallel testing and field-to-field validations** across multiple waves, including extract validation and universal key checks, to ensure **end-to-end data integrity**.
- Leveraged **Azure Databricks Notebooks** and **Azure Synapse Analytics** for efficient data validation, verification of key metrics, and automation of QA processes.
- Ensured **traceability and accountability** by linking executed test cases to outcomes in **ALM**, providing complete visibility throughout the QA lifecycle.
- Contributed to a 30% improvement in QA cycle efficiency across 6+ subject areas, enabling on-time HEDIS 2.0 delivery while maintaining rigorous compliance and quality standards.

Project: -SUTTER HEALTH (US HEALTHCARE)

Nov 2024 – April 2025

Role: -Quality Assurance Analyst – Power BI & Web Testing

Tools & Technologies: Power BI, SQL Server (SSMS), Java, Selenium, Azure DevOps (ADO), Test Automation

Key Responsibilities & Achievements:

- Played a key role in **QA testing for Power BI dashboards and web applications**, ensuring **data accuracy, usability, and robust performance** across platforms.
- Conducted **manual and automated testing** of critical metrics, leveraging **Java and Selenium** for **XPath-based validation** and optimizing automation workflows.
- Developed 20+ automation scripts for regression and functional testing, cutting manual testing effort by 35% across 3 major Power BI dashboard releases.
- Prepared and maintained **comprehensive Test Validation Reports**, documenting processes, results, and compliance with project requirements for **data-driven decision-making**.
- Managed the **defect lifecycle** in **Azure DevOps (ADO)**, including defect identification, tracking, and resolution, ensuring smooth project execution and high-quality deliverables.
- Collaborated with **cross-functional teams** to integrate test results with development and business units, driving **alignment and quality assurance** throughout the project lifecycle.
- Performed **data validation and comparison between SQL Server (SSMS) and Power BI dashboards**, ensuring **data integrity, consistency, and alignment with business reporting standards**.

Project: CAPITAL GROUP – AFS (Banking & Finance)

May 2025 – Present

Role: QA Analyst / Automation & API Tester

Tools & Technologies: Postman, Swagger, JIRA, GitHub, Selenium, SQL, Test Automation

Project Overview:

Executed end-to-end **API, UI, and Automation testing** for Banking & Finance applications, ensuring functionality, performance, and compliance with business and technical requirements across multiple environments.

Key Responsibilities & Achievements:

API Testing & Validation:

- Conducted **comprehensive API testing** using **Postman and Swagger**, validating 50+ APIs and responses across multiple environments.
- Developed and executed complex API requests, including **header management and response validation**, ensuring alignment with business logic.
- Prepared and executed 300+ detailed test cases covering 50+ APIs, achieving 98% test coverage and zero critical defects at go-live.
- Managed defects using **JIRA**, facilitating **timely resolution and effective communication** with development teams to maintain project momentum.

UI Testing:

- Led **UI testing** for web applications, ensuring seamless **front-end functionality** and consistent user experience.
- Verified **UI component performance and design adherence**, ensuring compliance with business and technical specifications.

Automation Testing:

- Spearheaded automation testing by cloning GitHub repositories and building 15+ reusable test scripts, reducing regression cycle time from 3 days to under 1 day.
- Performed **smoke and regression testing**, validating critical application features after each release and ensuring that new code changes did not impact existing functionalities.
- Enhanced **test coverage and consistency** across releases, optimizing automated tests to handle complex scenarios and increase overall testing efficiency.

Awards & Certifications

- **AZ-900: Azure Microsoft Azure Fundamentals**
- **AI-900: Microsoft Azure AI Fundamentals**
- **PL-900: Microsoft Power Platform Fundamentals**
- **Google Cloud Certified - Associate Cloud Engineer**
- **Databricks Certified Data Engineer Associate**
- **GEN AI Gen Wizard LEVEL 2**
- **Google Cloud GEN AI Leader**
- **Information Security Advocate Elite (2025)**
- **Microsoft GITHUB Copilot (GH-300)**
